

JAISHREE BASKARAN

AI/ML Engineer | Data Analytics | Web Developer

jaishreebaskaran@gmail.com | +91 9361307733 | [LinkedIn](#) | [Github](#) | [Portfolio](#)

Education

SRM Institute of Science and Technology

2026 Batch

B.Tech in Computer Science and Engineering, CGPA – 8.7

Experience

CANIT Solutions | Amaravati smart city (Government project)

Jan 2026 - Present

Software Developer (Technical Lead)

- Architected and built critical geospatial visualization components for a government-backed Smart City platform, including side-by-side comparison views for multi-month spatial data (master-slave layer sync) and AI-powered change detection between time periods.
- Owned end-to-end development of scalable map-layer infrastructure using Mapbox and Leaflet, integrating QGIS/ArcGIS-sourced spatial data into AWS-backed real-time visualization workflows.
- Built CANIT Pulse (analytics platform with Meta/YouTube API integration, RBAC, automated reporting) and developed predictive analytics/anomaly detection models for Smart City urban intelligence.

SIMS Hospital

Jun 2025 - Apr 2026

Intern - Web App developer

- Engineered a full-stack media management system for SRM Groups using React, TypeScript, and Android TV.
- Worked with operational data and system metrics to improve uptime and performance across 500+ connected devices.

Revature

Jun 2025 - Jul 2025

Project Intern - AI/ML Developer

- Built an ML-based course recommendation engine for personalized training, improving relevance by 25%.
- Developed an AI-powered GitHub PR bot to automate code reviews, reducing review time by 40%.
- Improved internal dashboards and UI workflows, enhancing data visibility and user satisfaction by 20%.

Rotork

Jun 2024 - Jul 2024

Project Intern - Software Engineer

- Designed and implemented a GUI to visualize actuator performance data, increasing data accessibility by 35%.
- Assisted in requirement gathering, data integration, and testing of performance visualization systems.

Leadership

President, Association of Computer Science Engineers

2025 - 2026

Editorial Head, Campus Newsletter

2023 - 2025

Paper Publication

CarbonIQ – AI Driven Carbon Footprint Intelligence System (Best paper award - ICISD'26)

AI-driven carbon footprint system using Random Forest & K-Means, aligned with Indian standards, supporting **scalable analysis from household to industry level** with personalized sustainability. (LLM, Python tools, ML tools, Scikit-learn)

Skills

AI / Machine Learning: Python, Machine Learning, Deep Learning, NLP, Transformers, RAG Applications, LLMs, LangChain, LangGraph, Regression Models, TensorFlow, Scikit-learn, Pandas, NumPy, Computer vision.

Data & Backend: AWS, Supabase, PostgreSQL, MySQL, Power BI, Tableau, Matplotlib, KPI Dashboards, Render.

Web development: React, TypeScript, JavaScript, HTML, CSS, FastAPI, REST APIs, Node.js.

Projects

CosmoScan – A Galaxy Identifier Using Computer Vision (2025) - Developed and published CosmoScan, an AI-powered galaxy classification system that blends astronomy with deep learning to identify galaxy types with high precision. [Link](#)

F1 Race Performance Predictions Based on Weather Conditions (2024)- An ML model to predict Formula 1 race performance using weather data for strategic insights. [Link](#)

Write n Site (2024) - Created an ML system for handwritten text digitization using supervised learning, achieving over 92% character recognition accuracy and ensuring a user-friendly interface for practical, real-world usage. [Link](#)
